Mariner Mars '64 First Spacecraft Images from another Planet- The Adventure Begins

*Presented by Mike Sander, Manager,
Exploration Systems and Technology Office*

When Mariner Mars '64 returned its 22 images of Mars, it began a planetary imaging adventure that has excited the public and helped make solar system exploration a central element of the US civilian space program. The contrast between these first few images and the remarkable images we now expect is dramatic. This talk will highlight a few memories of this first pioneering step.

Everyone is welcome.
