“Google” is already a synonym for “search”; but are you satisfied with the results you find?

Do you want to be more effective when you use Google?

Do you usually just look at the first three results?

If you don't see what you are looking for, what do you do? Do you want to be more effective when you use Google? Are there tips for getting better results? If you are interested in any of these questions, this is the workshop for you.

At the end of the class, you will have learned:

Ways to improve the accuracy of your Google search results,

How to find “hard to find” information,

How to find the needle in a haystack,

How to locate technical information,

How to search for images.
